

Keval Darji

Machine Learning | Computer Vision | AI Engineer

kevaldarji@outlook.com | [Keval Darji@LinkedIn](#) | 9408404749

Profile

AI & Generative AI leader with 9+ years of experience driving enterprise AI transformation across FMCG and banking, spanning Agentic AI, LLMs, Generative AI, machine learning, deep learning, NLP, and computer vision. Proven track record of translating complex business problems into scalable, production-grade AI solutions, from strategy and RFPs through architecture, engineering, deployment, and adoption.

Experience

Manager | Deloitte Touche Tohmatsu India LLP | October 2025 - Present

- Led the design and enterprise deployment of **AI-powered solutions across procurement and sales functions** for global FMCG clients, transforming fragmented data into actionable intelligence for cost optimization, account growth, and data-driven decision-making.
- Built **Agentic AI solutions and autonomous agents** to ingest, validate, classify, and analyze internal business data, enabling real-time insights across spend, supplier performance, sourcing opportunities, procurement exceptions, account performance, and sales trends.
- Developed **360° Sales Intelligence capabilities** by combining internal enterprise data with external web intelligence, providing Sales Reps with comprehensive restaurant profiles covering digital presence, customer engagement, menu/product offerings, purchasing behavior, and market positioning.
- Enabled AI-driven identification of **cost-saving, cross-sell, up-sell, retention, supplier risk, and innovation opportunities**, along with root-cause analysis of procurement and forecast variances, translating complex data into actionable business recommendations.
- Architected scalable, production-grade solutions using **Python/FastAPI, React, Agentic AI, intelligent orchestration, caching, and Microsoft Azure**, optimizing LLM usage, latency, token consumption, and compute costs while ensuring enterprise security, governance, and scalability.
- **Worked on multiple RFPs leveraging Agentic AI-based solutions:**
 - **AI-powered automated commentary and business interpretation of balance**

data, transforming complex financial information into concise, decision-ready insights

- **AI-enabled, unified and governed source of sustainability performance data**, providing actionable visibility into KPI and supplier performance and generating AI-driven recommendations to improve sustainability outcomes
- **AI-powered contract grading and assessment solution** to evaluate contract quality and standards, identify improvement areas, and generate recommendations to strengthen contract effectiveness and drive improved supplier performance

Team Lead | Navaera Software Pvt. Ltd. | September 2020 - October 2025

- **Spearheaded the development and deployment of banking solutions**, overseeing the complete software development lifecycle from initial planning and analysis to final deployment and maintenance.
- **Led the end-to-end machine learning lifecycle**, which included data collection, meticulous preparation, and the development and training of deep neural network architectures.
- **Specialized in fine-tuning and training large language models (LLMs) from scratch**, demonstrating a deep understanding of advanced deep learning techniques.
- **Managed and optimized production environments** by leveraging Docker Swarm for seamless model deployment and scaling.
- **Drove innovation across key projects** in Computer Vision and Natural Language Processing, including:
 - **Computer Vision**: Developed high-accuracy solutions for **cheque fraud detection** and **offline signature verification**. Implemented deep learning-based
 - **Document OCR** to accurately extract both machine-printed and handwritten text.
 - **Natural Language Processing**: Built a comprehensive **News Aggregator** using a combination of Generative AI and classic machine learning models. Created robust **Name and Address Parsers** for structured data extraction.
 - Built **Similarity Search Engine** for information retrieval for most probable entities involved in the transactions when working on noisy data.

Machine Learning Engineer | TCS | August 2018 - September 2020

- **Led the development of the company's first automated smart surveillance system** for a leading global investment firm. This event-driven system was designed to operate independently and create unique profiles for customers to enhance support.
- **Pioneered the use of visual inference** to create intelligent customer profiles and analyze customer activities, enabling data-driven insights.
- **Developed and implemented a range of computer vision solutions**, including **person tracking, face detection, face recognition, Office space recognition, area of activity detection** and the ability to detect **suspicious activities**.

System Engineer | TCS | November 2016 - July 2018

- **Contributed to a large-scale mainframe migration project**, developing and enhancing a decades-old codebase to meet new client requirements.
- **Engineered a Java application** to visualize structured data files generated by the mainframe, making the information accessible and human-readable outside of the mainframe environment.

Skills & Abilities

- **AI & Generative AI:** Agentic AI, AI Agents, Generative AI, LLMs, LLM Fine-Tuning, Prompt Engineering, MCP, RAG, Intelligent Orchestration, AI-powered Decision Intelligence
- **Machine Learning & Deep Learning:** Supervised/Unsupervised Learning, Neural Networks, Model Training & Optimization, NLP, Computer Vision, Information Retrieval, Similarity Search
- **Technology:** Python, FastAPI, React, Azure, Docker, Docker Swarm, REST APIs, Distributed Systems, Azure, GCP, Databricks
- **Leadership & Delivery:** Technical Leadership, Solution Architecture, Team Management, End-to-End SDLC/ML Lifecycle, RFP & Solutioning, Stakeholder Management, Enterprise AI Transformation
- **Business & Analytical:** Problem Solving, Data-Driven Decision Making, Business Process Optimization, Root-Cause Analysis, Opportunity Identification, Strategic Solution Development
- **Computer Vision:** OCR, Handwriting Recognition, Face Detection & Recognition, Person Tracking, Signature Verification, Activity & Anomaly Detection
- **Natural Language Processing:** Text Classification, Entity Extraction, Name & Address Parsing, News Aggregation, Semantic Similarity, Information Extraction

Education

B.E. Computer Science & Engg. | June 2016 | 7.6 CGPA | Gujarat Technological University
